

Florian Rumiel

Cloud Developer – Generative AI Specialist

✉ rumiel.florian@gmail.com ☎ +418-905-3574

Professional Summary

Cloud developer specializing in generative AI, RAG/GraphRAG, and LLM orchestration. Designs and deploys production AI applications on AWS Bedrock and Google Vertex AI using Terraform. Strong foundation in cloud infrastructure, vector databases, and DevOps. Open source contributor advancing AI tooling ecosystems.

Technical Skills

LLM Orchestration, RAG/GraphRAG, Agentic AI, AWS Bedrock, Google Vertex AI/ADK, LangChain, LlamaIndex, Haystack 2, PGVector, ChromaDB, Neo4J, Langfuse, FMEval, AWS (EC2, Lambda, S3), GCP (Vertex AI, Cloud Run), Terraform, Docker, GitHub Actions, Python, C#/.NET, FastAPI, pytest, CI/CD · AWS Cloud Practitioner, Terraform Associate · French (native), English (bilingual)

Professional Experience

Cloud Developer – GenAI

Aug 2025 – Jan 2026

Levio – Simons, Quebec

- Built multi-format document ingestion on GCP for a RAG/GraphRAG knowledge base, supporting video and legacy codebases (IBM i / AS400)
- Designed extraction pipelines with Google Vertex AI and ADK to surface business knowledge from legacy apps, backed by Spanner

Senior Developer – Levio – Desjardins, Quebec

Dec 2024 – Jul 2025

Cloud Developer – GenAI & AI Orchestration

Apr 2024 – Present

Levio – RSDE-CSPRP / Ministry of Cybersecurity and Digital, Quebec

- Designed RAG-based conversational AI on AWS Bedrock (Claude 3, Mistral AI) with LangChain for data protection compliance and government chatbot use cases
- Deployed full AWS infrastructure end-to-end using Terraform
- Conducted R&D on LLM orchestration to reduce latency and improve response quality, backed by PGVector
- Built a test bench measuring conversational AI performance; trained production support teams

DevOps Analyst

Sep 2022 – Jul 2023

Levio – Ministry of Justice of Quebec (MJQ), Quebec

- Configured and managed Azure cloud resources supporting ministry initiatives
- Developed a PowerShell pipeline analysis tool to eliminate redundancies between source code and IaC
- Configured access control strategies for versioning and deployment in Azure DevOps

Software Developer

Jan 2020 – Aug 2022

Noovelia, Quebec

- Maintained and developed warehouse management and gas delivery tracking systems using C# .NET, Xamarin, and SQL Server
- Refactored frontend codebase by 40%, achieving 2–3x faster execution
- Improved UI/UX across a dozen features in a Flutter app within a multidisciplinary team
- Maintained and refactored REST APIs in a microservices architecture

Education

Bachelor in Applied Sciences - Computer Science

UQAC, 2017

Projects & Open Source

- **Haystack 2 Contributor:** Implemented AWS Bedrock integration for LLM tool calling, enabling function-based agentic workflows.
- **Logistic Platform Prototype:** Built a prototype logistics management system using Supabase and Flutter, showcasing real-time tracking and project visualization capabilities.
